

# THE ATAS DIFFERENCE

TOPIC: PRE-NOTCHED "Z"

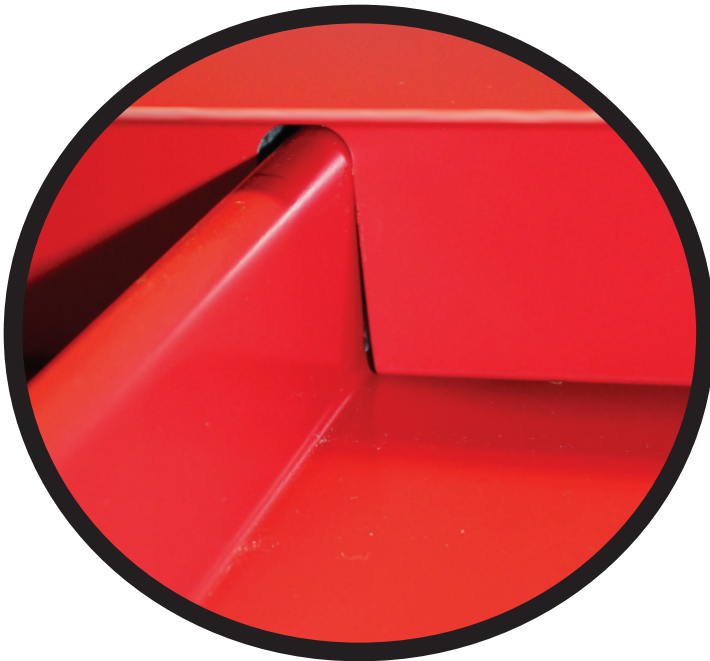

## Did You Know?

ATAS International, a leader in sustainable building envelope technology, offers pre-notched "z" closures. The closures can help you save time and money while creating a better looking and more trouble free roof system.

The ATAS pre-notched "z" closure ensures every closure fits our panel profiles accurately time and time again. No more measuring, cutting, and handling extra trim pieces. You will have simplified alignment for associated ridge and hip cap, and be assured that the fit will be tight and true.

Non-vented pre-notched "z" closures are available in matching material, gauge and colors. ATAS pre-notched vented "z" closures are made from 0.032 aluminum for corrosion resistance; with colors to match the roof panels.

Architects, building designers, and owners will appreciate the ATAS pre-notched "z" closures as they help to create a more weathertight roof system with a clean appearance.
