

# Portion Grader

Automatically routing to various product channels

## FEATURES & BENEFITS

- » Gentle handling
- » Accurate transfer
- » Alignment is controlled
- » Customizable setup
- » Pick & Place effect

Portion Grader is designed to distribute portions from the Valka Cutter to the appropriate product stream while maintaining the correct alignment.

The grader is built with linear servo robots and a pin “gripper” that gently drags each piece to the desired routes to a parallel or perpendicularly moving conveyors.

The setup is completely customizable with options for numerous different product routes. It offers a flow control to optimize the utilization of packaging or freezing equipment.

## GET IN TOUCH

Contact us for more information and find out how the machine fits your processing needs.
