SPEC-CAST ENGINEERING
Trusted to deliver

Bulk Materials Handling Products

Bucket Elevators

Steel Buckets
Suitable for elevating sharp, bulk density materials

HDPE Buckets
Suitable for handling large volumes of all types of grains, feed and most food products

Nylon Buckets
Suitable for high impact & abrasion resistance. Better heat resistance and handling hot, abrasive and sticky materials

HDPE & UHMWPE Sheets

Ultra-High-Molecular-Weight-Polyethylene (UHMWPE) is thermoplastic engineering material, and its molecular weight can reach 4.5 to 9 million. It combines many characteristics such as abrasion-resistance, impact resistance/absorption, chemical corrosion resistance, low temperature resistance and self-lubrication etc.

Available in Black or White

HDPE SHEET: 2000 x 1000 x 10-60mm
UHMWPE SHEET: 3080 x 1220 x 10-60mm

Seats for safety and strength

The Seat Connection has been a regular and frequent supplier of mining seats for some 30 years.

We have a fully equipped workshop and professionally trained team to assemble new seats and repair or restore used seats.

Developed for strength, our THESCO Mining Seats with their compact EU approved suspensions are ideal for limited space environments and harsh conditions.

INTRODUCING

SPEC-CAST WEAR PARTS

Trusted to deliver

EXTREME IMPACT AND ABRASION RESISTANT WEAR PLATE

ENGINEERED TOUGH & DUCTILE, LIKE NO OTHER WEAR PLATE

QT-PLUS® wear life is 3 to 5 times longer than AR400 commodity wear steel.

QT-PLUS® proprietary chemistry and unique thermal heat-treating process produces a premium quality, severe impact and abrasion resistant plate unmatched in the industry. This incredibly tough and through-hardened steel with extraordinary ductility, is produced with tightly controlled carbon levels for ease of weldability, and excellent formability.

EXTREME ABRASION RESISTANT CHROMIUM CARBIDE OVERLAY PLATE

INCREDIBLE HARDNESS, UNRIVALED PERFORMANCE

CHROME WELD™ 600 is a 600 Brinnell chromium carbide plate that is ideal for surfaces requiring high levels of abrasion resistance.

CHROME WELD™ 600 typical hardness ranges from 58-62 HRC based on weld deposit thickness. The surface of the plate exhibits numerous hairline cracks which are a natural stress relieving phenomenon that enable it to be formed, bent, and rolled without damage.

We service OHVs, industrial earthmoving vehicles, and agricultural ones, with specialisations in the following types of transmissions

Allison Fuller • Clark • Caterpillar • Funk Twin Disk

 **Allison**
Transmission

Vortex Transmissions sell genuine Allison parts for all our transmissions
Dyno testing is done in house and all transmissions that are tested have test reports.

Dyno Testing

Bell Dropboxes

Vortex Transmissions offers a complete array of diagnostic and repair services for heavy duty automatic transmissions. These include services for industrial earthmoving and agricultural vehicles.

We use a mixture of experience and sophisticated technology to perform diagnostics, allowing us to take a focused approach to repairing transmissions.

THE POWER OF PRODUCTIVITY

ULTIMATE EXCHANGE COMPONENTS

Short lead times, Customer service, Cost savings, Quality workmanship Combined, enable us to be extremely qualified to handle your Repairs and Manufacturing needs.

**Certified SEM
Dealer & Agent**

ALL NAMES USED FOR ILLUSTRATION PURPOSES ONLY

HYDRAULIC CYLINDERS

Manufacturing & Repair of ALL Hydraulic cylinders are done to OEM specification. Various Service Exchange units available for Most Brands.

MACHINE & COMPONENT REBUILDS

All Component repairs done in house using OEM parts
Partial & Full "0" Hour Rebuilds on ALL Earthmoving equipment
Final Drives, Wheel Stations, Drop Boxes, Engines, Transmissions

FIELD SERVICE

Mobile Line-Boring, Boilermakers
Strip & Assemble Assistance

ENGINEERING SERVICES

Repairing & Manufacturing Buckets
Repairs to Dozer Blades, Track Frames,
Equalizer Bars, Repairs to Booms,
Sticks, Bowls & Track Frames

PARTS SUPPLY & PROCUREMENT

Supply of OEM & Aftermarket parts
Purchasing Equipment & stripping for
parts or Rebuild

REBUILDS

Component Repairs & Supply
Engine Rebuilds & Supply
Midlife & Zero Hour Rebuilds

HPE Africa's new Hyundai R215 crawler excavators, which were launched locally in October 2023, are set to lead the way with many 'best in class' features that optimise efficiency, maximise productivity and ensure safety in arduous conditions.

A SMOOTH OPERATOR, EVEN IN TOUGH CONDITIONS

HPE Africa's new Hyundai R215 crawler excavators, which were launched locally in October 2023, are set to lead the way with many 'best in class' features that optimise efficiency, maximise productivity and ensure safety in arduous conditions. "Our new Hyundai R215 series - an exciting addition to our earthmoving portfolio - boasts many benefits, including a long, strengthened undercarriage for greater stability, an advanced ECO operating mode for enhanced fuel efficiency and higher profitability, and new features for improved safety on site," explains Ross Collard, Managing Director, HPE Africa. "The Hyundai design team continually advances its wide range of earthmoving equipment to ensure maximum performance and proven quality. Design improvements also ensure greater precision, versatility, safety and simplified maintenance.

"Intensive field testing of R215 excavators in tough conditions shows impressive performance. What's significant are excellent digging forces (bucket – 15 500 kgf and arm – 12 000 kgf), higher maneuverability and traction force (21 100 kgf) and improved fuel efficiency.

"The newly designed operator cab offers more space, better visibility, easy to access controls and an adjustable fully suspension seat to ensure the operator has a comfortable and safe working environment and can work for longer hours without stress or fatigue. A large LCD monitor enables operators to choose between power, work and user modes and are also able to easily check on the machine's condition. Self-diagnostic systems for oil and coolant temperature and other vital statistics reduce downtime, while warning indicators ensure safer working conditions.

"The local market will also be pleased with the convenience of easy access for maintenance procedures, which means regular checks get done faster. The newly-designed, more efficient cooling system extends service intervals, reduces machine downtime and minimises operating costs."

The Hyundai R215 series - with a Gross Power (HP) of 140 HP @ 2 000 rpm and an operating weight of 21 700 kg – has a variable displacement axial piston type pump, with an electro-hydraulic control function that provides a wide range of flow at various workloads, to meet exact operating requirements. The water cooled, 4 cycle diesel, 6 cylinder in line, direct injection turbocharged engine is designed for power and reliability in challenging heat, humidity and dust conditions, without compromising productivity. Features for fuel efficiency include an advanced CAPO system and newly designed CMCU, power and working mode options. A fuel saving kit comprises sensors that monitor loads and sends signal to the main control valve to minimise fuel consumption. Fuel savings are enhanced by the exclusive power mode for breaker operation.

For enhanced efficiency, this series features a one touch deceleration switch and an auto idle function that prevent fuel losses by reducing engine rpm during no-load conditions. The auto-piloted swing priority increases hydraulic oil flow to the swing circuit in combined operation, which leads to a faster swing cycle for greater productivity and profitability. The open centre design of the main control valve provides fast synchronisation between the joystick and hydraulic components, increasing the speed and smoothness of operations. To enhance performance and prevent cavitation, the arm regeneration design helps to recirculate hydraulic energy from the return line to the pump supply line. Structural features for greater durability include a boom and arm made from high tensile strength steel, reinforced with steel bearings and internal baffle plates to maximise impact strength. The new forged ring body in the lower frame enhances the durability and structural integrity of the excavator, extending service life. A heavy-duty track shoe of the undercarriage provides better stability on arduous terrain. In addition, the control link is cast in a single piece design and the bucket linkages are reinforced to ensure high durability and greater digging forces. An important feature for optimum safety on site includes an automatic engine overheat prevention system that monitors the coolant temperature and automatically lowers engine speed if it overheats, preventing premature failure of the excavator. A counter-balance valve applies hydro-static braking, to stop the machine from rolling down steep slopes, while a holding valve keeps attachments locked in position. A specially designed cover protects the fuel tank during excavation operations. Another critical safety feature is the anti-restart system. HPE Africa specialists recommend the use of Hyundai genuine parts and lubricants to ensure the highest levels of performance, reliability and safety from every machine. The company's range includes Hyundai wheel loaders, tracked and wheeled excavators, backhoe loaders, skid steer loaders and motor graders. HPE Africa also supplies and supports Soosan hydraulic breakers and quick couplers, which are complimentary attachments to Hyundai construction equipment.

All machines are supported by skilled technical service and after-sales teams throughout Southern Africa.

HOW POWER PLANT OEMS CAN HELP ADDRESS SA'S ELECTRICITY CRISIS

As the South African government mulls over ways to improve the performance of Eskom's coal-fired power stations, collaborating with power plant original equipment manufacturers (OEMs) may be the answer to optimising power generation and ultimately put an end to load shedding. Thava Govender, CEO of Babcock's engineering business, says long-term partnerships with power plant OEMs may be the much-needed solution to addressing the electricity crisis and stabilising the grid. That the lack of reliable electricity supply is one of the biggest economic constraints in South Africa is no overstatement. To provide context, record levels of load shedding were experienced in 2022, with 207 days of blackouts recorded during the year, compared with 75 days in 2021. This has had a devastating impact on businesses and the economy at large. As part of government's efforts to solve the electricity crisis and end load shedding, National Treasury proposed a total debt-relief arrangement for Eskom of R254-billion during the 2023 Budget Speech. However, the arrangement came with strict conditions to safeguard public funds. One of the conditions was that Eskom would implement the recommendations of an independent assessment of its operations, which was commissioned by National Treasury. In February 2023, National Treasury announced that it had appointed the German VGBE Energy Consortium to assess and investigate the operations of Eskom's coal fleet. The outcome of the assessment, which was concluded in July this year, will consider a concession model which could see OEMs playing a central role in turning around and improving the energy availability factor (EAF) and performance of Eskom coal-fired power plants.

Why OEMs?

According to Govender, it is important to note that the root cause of the current electricity crisis in the country is the lack of sustainable maintenance, not insufficient energy capacity, as is mostly purported. While South Africa's coal fleet has a 51% EAF, many plants globally of the same age are operating at a much higher EAF of over 85%. Currently, says Govender, 80% of unavailable power is due to inadequate attention, with only 20% of the power stations on planned maintenance. Over the years, lack of proactive engagement with OEMs has hampered determination, definition and optimisation of a detailed maintenance scope. The devaluing of OEM support has therefore impacted their ability to effectively support Eskom. One of the reasons for disregarding OEM engineering services is the perception that OEMs are expensive. The truth of the matter, stresses Govender, is that OEMs are not expensive – they offer a premium service which, of course, calls for a significant initial capital investment, which is in fact outweighed by the substantial return on investment through a much higher EAF over the lifecycle of the power plants. The comprehensive lifecycle support capabilities are made possible by the OEMs' strong skills base, which is a big overhead cost they have to carry and have invested in over the years. To remedy the current power crisis, Govender believes that power plant OEMs have an important role to play. By their nature, OEMs offer end-to-end services – designing, supplying, operating, manufacturing, constructing, commissioning, maintaining and guaranteeing the long-term performance of the critical boilers, turbines and generators, amongst other critical components of the power plants that they supply.

One of the sustainable ways of reviving Eskom's coal fleet is through the refurbishment of the power stations – restoring the plants to their near original state. According to Govender, most of the power stations were built decades ago, and were designed for a certain coal quality available at the time. With coal quality deteriorating over the years, OEMs – leveraging their access to new technologies, local expertise and global best practices – have the ability to upgrade the necessary components such as boilers and turbines to allow the old power stations to operate at peak performance using the new grade of coal available. However, stresses Govender, these changes require time to assess and correct, especially given that there have been some undocumented modifications to the power stations over the years. "OEMs bring a lot to the table in the quest to finding a lasting solution to the incessant load shedding," says Govender. "They possess a comprehensive understanding, drawings and design performance parameters of the power stations. With their access to developing technologies, they will definitely improve the performance of the coal fleet." The other key benefit of engaging OEMs is that they offer the necessary spare parts needed to keep these power stations running at peak performance. "At Babcock, for example, we manufacture a fair majority of the parts for our boilers locally. OEM parts guarantee an exact replacement of what was originally included on the boilers, for example. This, in my view, is incredibly important and worth any cost that comes with it."

Babcock's value proposition

As one of the leading boiler manufacturers, Babcock has a long track record spanning some 130 years in South Africa, with an extensive installed base of over 1 500 boilers during that period. In fact, the company has been involved in the construction and maintenance of some of the flagship coal-fired power stations in the country. One that quickly comes to mind is Lethabo Power Station, one of the top-performing power stations to date. The company has also been involved in the construction of the first six units for Matla Power Station, five units for Hendrina Power Station and five units at Grootvlei Power Station. Babcock also leverages OEM services to maintain and upgrade power stations that were originally built by other OEMs. Its engineering expertise enables it to effectively execute modifications and improvements. Some notable achievements include Kendal Power Station, where the company successfully executed a long-term maintenance contract since commissioning, until 8 December 2021. At Matimba Power Station, the company successfully replaced a main steam system to enhance reliability. Apart from building and maintaining power stations, the company has also expanded its scope with emissions abatement services. Having already successfully completed a NOx abatement project at a petrochemical plant in the country, where emission levels were reduced by almost 40% lower than the legal requirement, Babcock has successfully been awarded a contract to refurbish electrostatic precipitators at one of Eskom's power stations. "Another area of competence is mainstream pipework. We have already demonstrated our competence in this area at two Eskom power stations. In fact, we are the only company that has successfully executed a main system replacement from boiler to turbine," says Govender. Through its supplier development programmes, Babcock can directly empower local small and medium enterprises, micro-enterprises and qualifying small enterprises in the power value chain. "Through our Education and Training division, we have also demonstrated our commitment to developing skills, including those of artisans, mechanics and welders, for our own needs and also for the broader economy," says Govender. Babcock also leverages partnerships with leading international technology providers to ensure access and support from the best in the industry. "A lot of know-how resides within our organisation, but we can also tap into the strategic alliances we have with global technology partners such as the Babcock & Wilcox partnership in the United States. This partnership gives us access to the latest advancements which can be retrofitted on local power stations to optimise performance," concludes Govender. Watch online interview with Thava Govender on The Role of OEMs in the **Power Mix** > [LINK HERE - https://youtu.be/j7mldfOxGYk](https://youtu.be/j7mldfOxGYk)

FIVE-POINT ACTION PLAN TO DECARBONISE SOUTH AFRICAN MINING

Decarbonising the mining industry requires a purposeful methodology combined with a suite of solutions, says Erik Pretorius, Global Lead, Large and Strategic Projects, Mining and Minerals Processing, ABB. "Our automation and digital portfolio empowers miners to not only consider, but to succeed, in their 'all-electric' ambitions despite the shortage of electricity in the region." The ABB eMine™ solution consists of a broad portfolio of integrated electrification and automation solutions and takes on a different priority or definition in the respective regions globally. It focuses on supplying power to mining vehicles, with fit-for-purpose electrification to achieve the most optimised electrified process. In addition, the solution integrates with ABB Ability™ applications to plan, monitor, and control processes to optimise operations and energy usage.

A phased approach enables mines to immediately lower carbon footprints with a limited upfront capital investment, while simultaneously advancing progressively as technology becomes more mature, scalable and cost-effective.

ABB has developed a five-point action plan to develop an electric mine:

1. A strong foundation: ABB's broad portfolio

From pit to port and mine to market, we are equipped to electrify your mine. Our fit-for-purpose solutions are designed to meet the operational demands of the modern mine, and they are backed by ABB's decades of real-world experience in electrifying, automating and digitally connecting mine equipment and operations.

2. Collaboration to combine expertise and optimise outcomes

An all-electric mine requires all working together. The time to change is now. But the mining industry is clear that when it comes to electrification, nobody can make it alone. Partnerships and co-creating solutions with OEMs, other mining companies and governments are needed to successfully integrate electrification in mines.

We are working with OEMs to fast-track the development of new emissions-reducing systems with electrification and automation of the whole mining operation the goal. Our joint development and co-creation approach leverages the domain expertise of key partners to meet a wider range of needs.

3. Added value by early involvement in your all-electric mine design

An all-electric mine looks a lot different than a traditional one. Your ABB team will partner with you during the earliest stages of pre-planning and design, which will increase added value, provide greater costs savings, and reduce complexity. By getting in early, we can provide interoperable, fit-for-purpose solutions and technologies that make mines safer, smarter, and reduce carbon emissions. By integrating the whole mine digitally, we are set up to plan, monitor and control processes, and optimise operations and energy usage.

4. Solutions tailored to unique requirements of all-electric mines

Building on decades of mining project electrification experience and expertise, and over ten years' experience in providing charging infrastructure for buses, trucks and cars, we are able to offer solutions that are uniquely designed to handle the requirements of the mining industry based on latest technologies.

5. ABB lifecycle services

ABB services are tailored to the specific challenges of our customers. Through our advanced digital services, our mining experts can monitor your plant remotely 24/7 to help keep your production up and running. Advanced digital mining services can collect and analyse your mining asset and operational data, providing remote expert support to identify, categorise, and prioritise actions. Through remote services, predictive maintenance, and upgrades and retrofits, ABB helps mining companies ensure maximum performance throughout the mine's lifecycle.

For information about ABB's eMine™ approach, visit: <https://new.abb.com/mining/emine/5-pillars-to-transition-to-all-electric-mine>.

HIGH DRILLING COSTS DOWN WITH THE ALL-NEW FURUKAWA HCRL100-E3 HYDRAULIC CRAWLER DRILL HAMMER

Japanese master manufacturer, Furukawa Rock Drills (FRD), has released an all-new crawler drill to drive down the cost of drilling in southern Africa. FRD has customized a cost effective and economical drill rig, developed especially for local operating conditions. The new FRD HCRL100-E3 is an evolution of the well renowned FRD HCR 1500 ED-II model which has become a mainstay of mines, quarries and construction contractors across the region. This wide raft of changes was brought through operational input and feedback from its longtime distribution partner, ELB Equipment.

The company's national product manager, James Linton, says the latest adaptations are the culmination of decades of successful operations in the field, in Africa, that has allowed the manufacturer to continue fine-tuning its operation for even better performance, speed and cost per metre drilled. "It's a tough ask to improve on one of the most successful drill ranges in the industry but one that FRD has accomplished with the assistance from our customers' feedback and experiences."

More power

He elaborates that at first glance the FRD HCRL100-E3 has a more powerful 280kW engine and larger compressor to enable better efficiency at reduced RPM with its new Super Economy Mode that only uses power when it is needed with automatic throttle control and idling plus compressor low-pressure standby. This reduces fuel consumption by up to 8,5% and enables more power to be directed towards increased speed and more metres drilled per shift with bits up to 127mm (5 inch) diameter.

"If you need power it's got that in spades but with its Intelligent Drilling System (IDS) engaged it will only use as much as is needed to save fuel and minimise unnecessary wear and tear on the system. This also contributes to its already legendary Japanese reliability and ease of operation. Like all FRD equipment the clever engineering is done upfront at the design stages so that operators are not saddled with unnecessary, complicated machines that need highly specialised staff to maintain and repair. FRD achieves the same or better results with less complex mechanical and electrical systems on board. In African conditions this is a heaven sent as it means the machine can be maintained and kept productive with minimal outside assistance and is one of the key objectives of FRD, which is one of the world's most respected drill rig manufacturers.

Simply brilliant

"It's simplicity runs all the way to the controls and cab that gives operators a commanding view of every parameter of the operation in progress, with smart controls complimented by inputs from the IDS system. The cab is ergonomically designed to provide the operators with a productive workspace with air conditioning and other comfort features allowing the operator to remain alert and productive throughout, while safety features are in line with local requirements," says James. He concludes that the efforts in designing the ultimate crawler drill rig resulted in the FRD HCRL100-E3 and culminated in a rig that is tough, reliable and made available to the market at a price that is affordable and right for the market it serves. Yet, its main selling point is bound to be its high productivity rate and unmatched reliability in tough conditions. FRD drills simply cannot be beaten in that regard he says.

ELB Equipment, James Linton, Tel: (011) 306 0700, Email: jimmyl@elbquip.co.za, Web: www.elbequipment.com

earthbroker

your sourcing solution for new & used equipment & machinery

The Earthbroker is published monthly and 5400 copies are sent to all the mines, quarries, and all companies dealing with earthmoving and construction in South Africa, Africa and some overseas countries.

We are **ABC accredited**.

We also have a website where anyone can view the magazine, which is updated monthly with the latest changes and advertisements. Please view our E-Mag on www.earthbroker.co.za

Our E-magazine is uploaded monthly to Facebook, Instagram, Linkedin and our mobile App.

We accept about 5 editorials a month which we insert free of charge. Should you have an editorial which is relevant to the industry, we will gladly give it consideration.

For details of our prices on a full page , half page or quarter page, please phone me on 083 456 4027 or e-mail me at janine@earthbroker.co.za.

We do not ask anyone to sign a contract, however we do insist on a **full calendar month's notice** for cancellation.

Please note that all quotations exclude VAT. We do insertions, (own printing costs) at R1.50 each excluding VAT.

Classifieds at R500.00 excluding VAT for a business card size advertisement only.

Janine Sargeant
(CELL) 083 456 4027
janine@earthbroker.co.za

Should you want to receive a free copy of our magazine please email your details to janine@earthbroker.co.za

Conditions of Acceptance for advertising

Adverts are subject to the following conditions:

- 1. Often we receive faxes with illegible letters or numbers. We accept no responsibility due to this.
- 2. We accept NO responsibility for errors in advertisements received telephonically.
- 3. We reserve the right to refuse placement or to place the advertisement/s as we see fit.
- 4. No responsibility will be taken for omission of advertisements, for any errors/colour-differences in advertisements or any results due to such errors.
- 5. We accept no responsibility for the quality of goods advertised. We merely bring buyers and sellers into contact with each other and we are not responsible for any results due to transactions made through the advertisements.
- 6. Please note one full calender months written notice for cancellations.
- 7. Payment due prior to publication or interest will be charged.
- 8. There will be an annual increase of 10% at the beginning of each year.
- 9. The Earthbroker will not be held responsible for content of any advert inserted in our magazine.
