LIFE  
SHARP

# LifeSharp

**GUARANTEED  
FOR LIFE**

When we say a Benchmade is yours, for life, we mean it. We will re-sharpen your Benchmade back to a factory edge, anytime you need. Learn more at [benchmade.com/lifesharp-service](https://benchmade.com/lifesharp-service).

# MADE IN THE USA

## SINCE 1987

Since 1987, Benchmade Knife Company has combined precision machining with hand assembled designs, made in our factory in Oregon City, Oregon. Whether it's in the field, forest, or for everyday carry – Benchmade is committed to performance without compromise, for life.

Dear Valued Retail Partner,

On behalf of Benchmade, I am excited to introduce the incredible new products for the first half of 2024. Elevating our stance from last year, we are proud to showcase more of our heritage through the releases of products aimed at our most discerning customers. On top of that, we are celebrating a new launch of performance based products aimed at the water environment and the variety of familiar activities in this category.

Consistency and variety are amplified through this assortment and we are thrilled to put our collective efforts back in Oregon on display for key partners like you. We appreciate you holding us to a higher standard; it fuels the energy and passion within our products that we are proud to produce each and every day.

Thank you for your support. Here's to a fulfilling 2024.

Sincerely  
**Jon deAsis** - President & CEO

### EDC

Not obtrusive or uncomfortable in slacks or shorts, just convenient and well fitted to your general needs.

### OUTDOOR

From the woods to backpacking or car camping, overlanding or off roading, these versatile cutting tools can be used for many tasks.

### SURVIVAL

Things can happen unexpectedly for any adventurer. These knives have been built for the unexpected.

### WATER

Water environments can be unpredictable. These knives were designed to withstand hard use and cut with precision. You'll never leave land without one.

### HUNT

Knives are a critical component of a successful hunt. These are the most advanced hunting knives ever made.

### TACTICAL

Designed for hard, immediate use, these high-strength knives feature robust mechanisms for situations when every second matters.

### RESCUE

Built for critical situations. Gloved hands and the need to cut pliable materials are considerations in the design of these knives.

### CUTLERY

These knives seamlessly transition from camp to the tailgate to the backyard and the kitchen.

**HOW YOU CHOOSE  
YOUR KNIFE**

**DEPENDS ON HOW  
YOU LIVE YOUR LIFE**

## Metal Matters

# BLADE STYLES

### MANUAL OPENING

"Manuels" must be opened 100% from the closed position to the open position by the user.

### ASSISTED OPENING

"Assists" have a spring that encourages the blade into the open position once the user pushes the blade manually beyond a certain point.

### AUTOMATIC OPENING

"Autos" have a button or other actuation switch that mechanically fires the blade open without the user directly manipulating the blade.

### FIXED BLADE

These knives do not fold and almost always come with a sheath to protect the edge.

### BALI-SONG

"Bali" or "butterfly knives" open and close by way of two handles that rotate around the front and back of the blade.

#### BK

Black coating, no serrations

#### DLC

Diamond-Like-Carbon coating

#### FE

Flat Earth coating

#### GY

Gray coating, no serrations

#### NONE

No coating, no serrations

#### OR

Orange Coating

#### S

Serrations, no coating

#### SBK

Serrations and black coating

#### SFE

Serrations and Flat Earth coating

#### SGY

Serrations and gray coating

#### SL

Crushed Silver Coating

BK Black

ORG Orange

WHT White

SN Sand

OD Olive Drab

BLU Blue

\*-1, -2, etc. typically indicate handle material variations

### Trailing Point

The spine curves upward to create an elevated point that's typically higher than the handle.

### Clip-Point

Blade contains a sharp beak, typically forward of the midpoint, as if the spine has been "clipped off."

### Tanto

This shape is easily identified by the angular lines. The knife edge is flat and transitions with a hard break in the angle from the tip to the primary edge.

### Wharncliffe

Similar in shape to the sheepsfoot with a spine that 'rolls' into the tip earlier. This blade has a completely straight edge.

### Opposing Bevel

Design features a non-uniform blade geometry that creates an offset pry-tip, while maintaining a consistent chisel grind on the cutting edge.

### Drop-Point

Drops off the spine to the top. Tip height is typically above the center line on the blade.

### Spear-Point

Must be symmetrical considering the blade profile. \*Traditionally, spear-points are double-sided, but those knives are more specifically referred to as daggers.

### Straight Back

This shape features a curved cutting edge with a flat spine creating a keen tip for precision cutting

### Scimitar

A slightly curved blade that broadens toward the tip.

### Sheepsfoot

The spine of the blade "rolls" into the tip earlier. This blade has a completely straight edge.

# HANDLE MATERIALS

THE DEVIL'S IN THE DETAILS

MAGNACUT

### Carbon Fiber

A contemporary premium composite of thin strands of carbon tightly woven into various weave patterns, then impregnated with resin that is most commonly clear but can be color-tinted. It offers great looks and is exceptionally strong for its minimal weight.

### Stabilized Wood

A composite material of layered sheets of natural, dyed wood backfilled with resin. Stabilized wood is much more resistant to environmental hardships than natural wood.

### 6AL-4V Titanium

Considered an exotic metal alloy (titanium + 6% aluminum + 4% vanadium) with an excellent strength-to-weight ratio that offers exceptional performance in a knife. Titanium is corrosion-resistant to natural elements as well as many industrial chemicals.

### Richlite

Used as a lightweight construction material for decades, Richlite is a durable, multi-layer fibrous paper composite that can be dyed in a wide range of colors.

### 6061-T6 Aluminum

A nonferrous metal originally developed as a premium aircraft grade aluminum, it offers a solid handle form and function at a nominal weight. Most typically color-anodized which creates a hard protective surface finish.

### G10

An extremely durable makeup of layers of fiberglass soaked in resin, then highly compressed and baked. Impervious to moisture or liquid and physically stable under a wide range of temperatures. Most commonly black, but is also available in various colors.

### Grivory®

An amorphous nylon copolymer with exceptional dimensional stability. 50% or greater glass fill.

### Santoprene®

A thermoplastic elastomer that is molded to specification. It offers excellent flexibility with high tear strength and fatigue resistance. Resistant to many harsh chemicals. These features contribute to improved performance in a range of tough jobs.

## BUILT TO AVOID CORROSION

Corrosion resistance is measured by the resistance of a blade to oxidization and chemical attack. This is an important consideration when you're going to be in wet or humid environments and need a blade that can stand up to the elements.

## BUILT FOR STRENGTH

Blade strength is the maximum stress withstood before a blade breaks or fails. These are among some of the strongest steels in the industry that can stand up to the demands of hard use applications.

## BUILT FOR EDGE RETENTION

Edge retention is how long a blade can maintain its sharpened edge. When performing cutting tasks over and over, you need an edge that stays sharp. These steels are among some of the best for edge retention.

## BUILT FOR TOUGHNESS

Blade toughness is the resistance of a blade to fractures and chipping. This is an important consideration for activities such as batoning or other uses that may involve force on the blade to perform cutting tasks. These steels have exceptional toughness.

**N680** / HRC: 57-59

A special-application steel for when corrosion resistance is the primary requirement. Ideal for salt water applications, the addition of nitrogen to the alloy gives this the best corrosion resistance of any blade steel.

**M390** / HRC: 58-61

A super-performance blade steel with exceptional cutting ability and wear resistance.

**440C** / HRC: 58-60

Originally designed for ball bearings, valves and gears, this high-carbon stainless steel is the staple of the cutlery industry.

**154CM** / HRC: 58-61

A premium-grade steel developed for tough industrial applications. Known best for its all-around qualities, 154CM offers a good balance of corrosion resistance, toughness and edge quality.

**CPM-MAGNACUT** / HRC: 60-62

A new approach to stainless tool steel that eliminates chromium carbides from the microstructure. The result: A combination of properties with similar toughness and edge retention to non-stainless steels like CMP-CruWear and CPM-4V, with the addition of excellent corrosion resistance and strength. (60-62 HRC)

**CPM-S30V** / HRC: 58-60

As a blade material it offers excellent corrosion resistance and superb edge qualities.

**CPM-M4** / HRC: 62-64

A powder-metal, non-stainless, special purpose high-speed steel with excellent wear resistance and toughness.

**CPM-3V** / HRC: 60-62

A powder-metal tool steel, its high carbon and vanadium paired with low chromium make it exceptionally tough while still being able to maintain a good cutting edge.

**CPM-154** / HRC: 58-61

This powder-metal version of conventional 154CM steel has a much finer microstructure with smaller carbide particles than its counterpart, resulting in improved toughness and strength.

**D2** / HRC: 60-62

A high-carbon, high-chrome tool steel provides better edge retention than 440C and 154CM; however, it has less toughness and corrosion resistance than either of these alloys.

**CPM-S90V** / HRC: 59-61

A true super-steel, S90V offers substantial improvements in corrosion resistance over 440C and wear resistance far beyond that of D2.

**CPM-20CV** / HRC: 59-61

Excellent edge retention and great corrosion resistance are typically hard to find in one steel; however, they meet here in CPM-20CV.

**CPM-D2** / HRC: 60-62

This powder-metal version of conventional D2 steel has a much finer microstructure with smaller carbide particles than its counterpart, resulting in improved toughness and strength. A great choice for the customer who loves D2 but wants an upgrade in performance.

**DAMASTEEL** / HRC: 58-60

With alternating layers of RWL34 and RPMC27, this powder metal 'Damascus' steel doesn't just get by on its looks alone. The interweaving of these two alloys provides great strength and toughness.

**CPM-S45VN** / HRC: 60-62

The higher levels of Chromium along with the introduction of Nitrogen in S45VN allow for improved corrosion resistance over CPM-S30V and CPM-S90V, while balancing the excellent performance found in both of those steels.

**CPM-CRUWEAR** / HRC: 63-65

An air-hardenable non-stainless tool steel that has improved toughness and wear resistance over D2 steel. CPM-CruWear has vanadium to form extremely hard vanadium carbides for edge retention along with tungsten and molybdenum to increase the working hardness without reducing the toughness.

# GOLD CLASS

## THE IMMUNITY™

Following the 2023 launch of the 290-241 Full Immunity™, a new Gold Class unlimited limited variant offers a unique build for the collector looking for a tactical yet compact EDC knife. For quick, compact utility, the 290-241 Full Immunity™ is easily dispensed from concealment for your perseverance and protection. This sub-compact folder is a shot in the arm of unique, ultra-premium materials featuring Ægir™ patterned Damasteel® Wharncliffe blade style, unidirectional Carbon Fiber handles scales with an understated black wood grain effect, and bright Sapphire Blue accents including the blue-beaded lanyard for easy retrieval. The 290-241 Full Immunity™ is only available through December 31, 2024, and since prevention is the best medicine, best to get your little helper before it's too late.

# THE NECRON™

A high-performance butterfly knife with a focus on flipping, available in two highly customizable variants that pay homage to Benchmade's roots with a return to our Bali-Song's classic form and added bonus features. Optimized for expert flippers with latchless G10 handles and a CPM-S30V Scimitar blade, fine tune Necron's balance and speed with adjustable tungsten weights and extendable handles for your perfect flip and desired feel. Finished off with a hollow diamond texture found on the safe handle to give the user a tactile indication between the safe and bite handles.

# THE FISHCRAFTER™

A fisherman's minimalist, tough-as-nails cutting tool, the Intersect™ is a versatile, fixed blade built for convenient and quick access when seconds matter. An EDC for the adventurer, the Intersect™ dons a 2.75" drop-point blade forged of CPM-MagnaCut steel, ideally compact for the finer tasks, from cutting tangled line to, complete with handle and spine jimping for secure grip and pinch cuts when wet. Purposefully designed with a quick mount sheath that attaches to pockets, belts, backpacks, waders and beyond.

+ CPM-MagnaCut steel with SelectEdge®

+ White logo lasermark prevents corrosion

+ Santoprene handle provides solid grip

+ 7" and 9" blade options

# THE ADIRA™

+ CPM-MagnaCut steel

+ White logo lasermark prevents corrosion

+ Grivory® handle with grip texture

+ Paracord lanyard and bead included

A heavy-use folding knife built for tasks in wet environments — from bait prep to cutting lines to scaling small fish — the Adira™ is truly a waterman's EDC, crafted to support your outdoor lifestyle on and off the water. Featuring a drop-point blade made of CPM-MagnaCut stainless steel, this pocket-ready aquatic folder uses an Axis® Lock mechanism, with high-vis colored details and a useful orange lanyard for easy pocket access. A fisherman's favorite folder.

## DESIGNER COLLABORATIONS

Benchmade's collaborations with custom designers has created the most innovative and functional designs in the industry. These skilled artisans and craftsmen poured their passion into these designs and agonized over every detail. By collaborating with a selection of world-class custom designers, we were able to tap into innovative locking mechanisms, modern materials, and custom blending and finishing techniques.

### MEL PARDUE

The most senior design team member, Mel has been grinding sparks, making knives and creating a following for 25-plus years. His style has a class and simplicity all its own. The Pardue collaborations offer great utility to the every day knife user while at the same time presenting an upscale distinction. Less is definitely more with Mel's designs.

### BILL MCHENRY & JASON WILLIAMS

Talented designers and developers of several innovations in the knife-making world including the Benchmade AXIS® mechanism.

### WARREN OSBORNE

Bridging the gap between custom and production knives, Warren created some of Benchmade's most iconic and loved models like the 940 series, Barrage, Rift and Contego. Warren set very high standards for himself and we are proud that his work has become ingrained in Benchmade's DNA.

### SHANE SIBERT

Since 1994, Shane Sibert's goal has been to design and create unique knives that evoke pride of ownership while at the same time perform tasks and challenges with exceptional ease. A lifelong avid backpacker, Shane draws inspiration from hiking throughout the Pacific Northwest's vast wilderness. He's an occasional practitioner of martial arts and enjoys scuba diving in Oregon's chilly waters.

### GREG THOMPSON

Greg used an extensive background in mixed martial arts to create the Special Operations Combatives Program (SOCP), a designated program for U.S. Army Special Operations Forces. With over 15 years of experience training Special Operations soldiers, Greg currently works as the Director of Training for the XVIII Airborne Corps at Fort Bragg, NC
