

Innovative Pneumatic Solutions that Improve Machine Performance

AVENTICS™ Pneumatics Solutions

Cylinders and drives, valves and valve systems, air supply management.

FLUID POWER SOLUTIONS.

EMERSON™

Cylinders & Actuators

Emerson's time-tested and standard setting AVENTICS pneumatic and electric cylinders and actuators create a foundation for today's automated systems. No matter how compact or demanding your application, we have a solution to exceed your performance standards and stay within your footprint.

Standard Cylinders

ISO compliant and lightweight, including a variety of options to conform with specialized requirements.

Electric Rod-Style Actuators

Our electric actuators enable fast and powerful linear movement with high precision and efficiency.

NFPA Cylinders

Our NFPA interchangeable cylinders achieve long life, easy fitting and outstanding performance in the most demanding applications.

Round Cylinders

Compact robust designs that meet even the strictest requirements for a range of applications.

Short Stroke & Compact Cylinders

Simple, weight-optimized design with near-universal connectivity, these extremely popular cylinders can function in tight spaces.

Cylinder Valve Units

Ideal for decentralized use in applications, with easy assembly and connection and increased temperature range.

Rodless Cylinders

Guided and non-guided versions provide high performance for demanding applications.

Guided Cylinders

Our products precisely guide materials to their exact position in automated applications and set handling technology standards.

Double Piston Cylinders

Compact design within narrow, stackable bodies, these cylinders are suitable for a variety of automated applications.

Rotary Actuators

With a wide range of rotation angles & torque values, these rotary applications can be outfitted for the most applications.

Bellow Actuators

Available in single, double, and triple bellows. Designed to hold up in a wide range of temperatures and conditions.

Grippers

Large selection of grippers that handle materials with maximum precision and reliability.

Power Clamps

Flexible power clamps that can be easily adjusted and come with various options to fit your application.

Speciality Cylinders & Assemblies

Cylinders, rod locking units and actuators for special applications.

Pneumatic Valves & Valve Systems

Emerson is leading the way in efficient valves and valve systems for the most demanding automation tasks. Our modular technology is adaptable to your changing business needs and increased performance requirements. Supported by a wide range of connectivity options as well as functional accessories, our portfolio offers the right solution to automated applications in automotive, food and beverage, packaging and many other industries.

Valve Systems

Adaptability and quality to meet the most demanding functionality and connectivity requirements.

Fieldbus & I/O

Directly integrate valve systems into the control structure of your machine, with numerous I/O and sensor options.

Proportional Pressure Control Valves

Highly precise and dynamic pressure control for a wide range of applications and environmental conditions.

Proportional Flow Control Valves

Highly precise and dynamic flow control for a wide range of applications and environmental conditions.

Directional Control Valves

Delivering higher flow with compact packaging with a wide range of actuation and connectivity options.

Standardized Valves

Robust and with a wide range of options, our standard valves align with ISO standards in many environments.

Safety Valves

Valve technology that ensures safe operations and process control in many applications and industries.

Flow Valves & Block Valves

Effective flow control and reliable shutoff, with multiple mounting options for application customization.

Air Preparation, Sensors, and Vacuum Technologies

Emerson's modular air preparation products, including filters, regulators, lubricators (FRL), as well as vacuum technologies, help keep many industry applications running smoothly and safely. Our sensors enable users to gain insights in energy consumption and performance, which supports in gaining sustainability and productivity improvements.

Air Preparation Units

The modular versatility of our air preparation units can expand or be retrofitted to fit your application's changing needs.

Sensors

Measure pressure, flow and position in electronically or pneumatically actuated processes, working with most communication protocols.

Air Preparation Accessories

Tubing, gauges, sensors and other assembly material and products that complete many configurable applications.

Vacuum Technologies

Vacuum and gripper technologies that handles the most delicate materials in automated applications, with modular components.

Take advantage of everything you need for a future-proof pneumatic solution
