When You Need Insight

Get the WIKA InSight™

InSIGHT™

WIKA

InSIGHT™

WIKA offers options that are easy to see in low light conditions

When you're driving at night, you need to be able to see the road signs. WIKA believes that in your workplace, your instrumentation should be just as visible as a stop sign on the road.

To see your instrumentation when light is limited, you don't just need it to stand out. You need it to shine. That's why WIKA developed the InSight™ options. A special retro-reflective material with fluorescent colors offers the best of both worlds: during daylight hours the fluorescent color absorbs non-visual UV light reflecting additional light and making your instruments even more visible. In low-light conditions, the pattern of the retro-reflective material also makes instruments more visible."

Normal Light Conditions

Low Light Conditions

When it's dark, you need instrumentation that provides light

What happens when the power goes out? The InSight Glow™ option creates its own light using a photo luminescent material. With just 10 seconds of light, your instrumentation will shine bright in complete darkness. Just wave your flashlight, and instruments with this material will take in that light and illuminate, giving you the ability to read measurements, even in low-light conditions.

Having trouble seeing instrumentation from a distance? Does the sun seem to strike in the worst possible spot? WIKA also offers magnifying and anti-glare window options that provide yet another way for you to keep your instrumentation InSight.™

ISO 9001
Certified

For 70 years, WIKA has continuously advanced instrumentation for pressure, temperature, level, flow and force measurement. Our broad selection of standard and custom solutions, as well as services, work to support operational safety, productivity and profitability. A global leader in lean manufacturing, WIKA can be your reliable partner anywhere in the world.
